AON Chile

Location:
Santiago, Chile

Products:
Very Task, Very Wire,
Quincy (AIS) Elan,
Landscape, Elan.

Dealer:
BRWN

Architect / Design Firm:
Mussa Arquitectura

Overview

Haworth's furniture solution was a great contribution to the project and its dealer in Chile, BRWN, worked closely with our architecture studio, Mussa Arquitectos. The geometry of the floor was not easy, but the architecture design + Haworth's work, achieved an attractive, dynamic, organic and functional result, which assumed that difficult geometry, in favor of space, a very harmonious result that interpreted very well the corporate image that the client wanted to project.

Specifications

- Area: 2,000 sq. mts.
- Design Process: 3 Months
- Design Execution: 5 Months

Objective

The project of the new corporate offices of AON Chile, was developed in two floors of 1,000 m² each, in a building in Apoquindo street. Its architecture is very organic and has a complex geometry, which gave Haworth the opportunity to reflect and strengthen the change that the company wanted to make towards an open, dynamic, collaborative and innovative space, a step to the future in the new workspace.

This new corporate space allowed Haworth to incorporate the new demands of the working style, responding to the needs of the users, promoting and provoking integration, mobility, innovation and teamwork, in short, creating a platform, a space of work, that responded to the new era that AON was living.

The construction of the spaces facilitates communication between the teams. The work teams are closer and there is constant eye contact.

Only the offices of the managers are private, but absolutely glazed. The democratization of direct natural light and exterior view is radical and a fundamental value.

There are spaces for different instances to meet in a formal, semi-formal, informal, casual or scheduled way. The presence of natural vegetation, in all spaces, allows the mind to relax and renew the air permanently.

The large cafeteria + multipurpose room allows, in a limited space, many different activities in the same space. This space is versatile and can accommodate to different situations. It works as a cafeteria, for training, team meetings, presentations, socialization, lunches, recreational activities, among many other activities.

Having this platform, gathered all in one place with the possibilities of mobility, new technologies, natural light for all, cutting-edge furniture, spaces for interrelation, collaboration and innovation, will help achieve that the people of AON can develop and give an excellent service to its customers.
